

To use this template, WinEdit version 10.0 is preferable. And you must set the Latex's editor as follows:

1. Once you open *.tex file with WinEdit, firstly you must go to **Document** and click **Document Settings....**
2. Select **CP Converter** tab then set the document's environment as the following.
 - 2.1 Document Format: ANSI
 - 2.2 Custom ANSI Code Page: 936 OEM Chinese(PRC, Singapore)
3. Click **Apply** and **OK**
4. Close *.tex file and open it again.

Notice that the *.tex file should be compiled using PDFLaTeX . For figures, you can use *.jpg and *.png extensions directly. It is no need to convert them into *.eps extension.
